

THE TONGUE TAMER

Get a **GRANDVIEW** and see the cords on your first attempt.

GRANDVIEW™ Laryngoscope Blade

Improve your intubation success rate with the innovative **GRANDVIEW™** Blade. Created by an ER Physician to improve direct visualization of the cords,

the wider specially formed blade comes in two sizes to fit the majority of patients. For most calls, you can now carry two laryngoscope blades instead of eight. Both the child and the adult **GRANDVIEW** blades use the same super bright lamp design.

The **GRANDVIEW** blade makes it easier for you to see the tube pass through the cords. Get your hands on a **GRANDVIEW** blade and see for yourself why EMS providers across the country have chosen the **GRANDVIEW** laryngoscope blade as a "must have" airway management tool. Make sure to specify the **GRANDVIEW** blade on your next bid request. Contact your authorized Hartwell Medical dealer or give us a call at **800-633-5900**.
