Creating Quality Products for Life

CARE AND MAINTENANCE

The CATCH-ALL™ provides an easy and convenient storage area for small medical equipment that is frequently used on a majority of EMS calls. The flexible, vinyl-coated material is lightweight, durable and made of waterproof material that will not absorb blood or body fluids. These Care and Maintenance Guidelines are recommendations for maximizing the life and service of this product. You should always follow the specific cleaning and disinfecting practices dictated by your Medical Director.

CLEANING PROCEDURE

The CATCH-ALL should be cleaned using soap and water, a mild detergent, or a commercial cleaner/disinfectant. Any blood, body fluids or other soiled materials should be thoroughly removed prior to disinfection. Sodium hypochlorite (bleach) solutions may be used for disinfection, but avoid prolonged exposure of the vinyl material to high concentrations of bleach to avoid discoloration. A 1% bleach solution (or concentration compatible with current CDC Guidelines) can be used on the CATCH-ALL, but it should be thoroughly rinsed off with cold water and then allowed to dry. Other commercially available disinfecting agents suitable for use on vinyl surfaces may be wiped or sprayed onto the CATCH-ALL following the product manufacturer's recommended instructions for use, and allowed to dry completely.
