

THE TONGUE TAMER

Get a **GRANVIEW®** and see the cords on your first attempt.

Gold tip provides a visible reference point to reduce blade manipulation

Super bright proprietary lamp design provides more light than standard bulbs

Wider blade surface keeps the tongue out of the way and reduces the need to reposition the blade

Surgical grade stainless steel provides strength and durability, plus it's easy to clean and disinfect

Unique blade design provides a more anatomically appropriate curve which improves direct visualization

Fits all standard handles with no special connections required

Two sizes to fit the majority of patients encountered in the field

GRANVIEW® Laryngoscope Blade

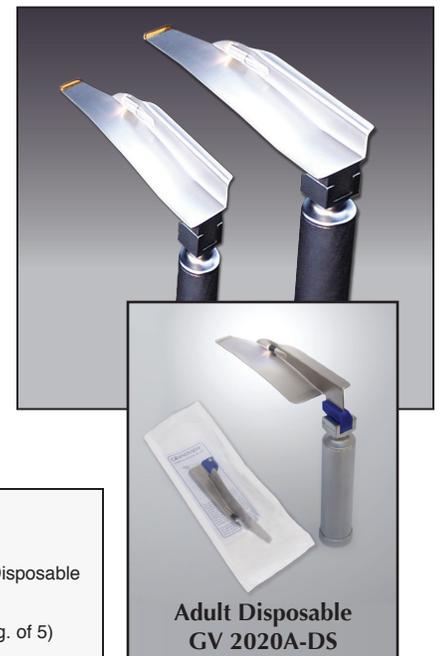

Improve your intubation success rate with the innovative **GRANVIEW** blade. Created by an ER Physician to improve direct visualization of the cords, the wider specially formed blade comes in two sizes to fit the majority of patients.

THE GOLD STANDARD FOR RELIABILITY

For most calls, you can now carry two laryngoscope blades instead of eight. Both the child and the adult **GRANVIEW** blades use the same super bright lamp design. The **GRANVIEW** blade makes it easier for you to see the tube pass through the cords. It's an innovative EMS tool that you can

always rely on under the most adverse conditions. Not

affected by blood, mucous, rain or humidity. Get your hands on a **GRANVIEW** blade and see for yourself why EMS providers across the country have chosen the **GRANVIEW** laryngoscope blade as a "must have" airway management tool. Make sure to specify the **GRANVIEW** blade - the economical solution that has been shown to improve first attempt success rates. Contact your authorized Hartwell Medical dealer or give us a call at **800-633-5900**.
