

BriteView®

COLOR CODE DISPOSABLE LED

Laryngoscope Blade System

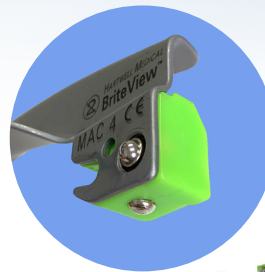

Designed by EMS professionals with real-life street experience. The BriteView® Disposable Laryngoscope blade provides a no flex blade, a bright light and is color-coded for instant size recognition.

The BriteView® Disposable Laryngoscope blade provides a no flex blade, a bright light and is color-coded for instant size recognition. Stainless steel construction means you do not have to compromise strength and reliability for the cleaning and maintenance-free benefits of a single patient use LED laryngoscope blade.

The unique color-coded heel makes it a snap to select the correct size blade for the job at hand. The blade sizes are also etched on the side of the blade in a large format for easy selection when placed on an instrument tray. The innovative package graphics are large and clear for easy identification in an emergency airway bag, under low-light condition or when restocking your vehicle's inventory. If you want a disposable blade that will not flex, will not break off the handle and will provide a bright reliable light source, then select the BriteView Blade System.
