

CombiCarrierII® Head Immobilizer

APPLICATION GUIDELINES

www.HartwellMedical.com

Creating Quality Products for Life

INTRODUCTION

The unique design of the CombiCarrierII® Head Immobilizer allows the Base Plate to be secured to the CombiCarrierII and left on the device in the ambulance storage compartment. The Head Immobilizer is x-ray compatible, easily cleaned, compact and simple to use! These instructions are applicable to both the CC 3400H and the CC 3400H-BK.

INCLUDED IN THE PACKAGE

The CombiCarrierII Head Immobilizer consists of the following:

1 each	Base Plate
2 each	Support Blocks
1 each	Head Strap

APPLICATION INSTRUCTIONS

The photos to the right show how the Head Immobilizer is easily attached to the CombiCarrierII and used to secure a patient.

IMPORTANT: Always follow your local medical protocols established by your medical director.

1. Attach the Base Plate of the Immobilizer to the head of the CombiCarrierII by threading the long strap through the “D” shaped holes of the CombiCarrierII as shown in photo 1. The strap is threaded up through the hole, across the top face of the CombiCarrierII, back down through the hole on the other side and then secures to the loop material on the top of the Base Plate.
2. Front of the CombiCarrierII with Base Plate attached.
3. Once the patient’s body has been properly secured, place the Head Support Blocks on both sides of the patient’s head, just above their ears, making sure the blocks fit snugly against the patient’s head. The base plate strap end will not hinder the retention of the Head Support Block once the Head Strap is in place.
4. Secure the patient’s head with the Head Strap, passing each end through the D-rings on either side of the Base Plate and securing the strap with the hook and loop material on both ends of the strap.
